

Appendix 9

United Utilities DE5 Surface Water Drainage and Surface Water Flooding

DG5 records relate to surface and foul water sewer flooding and are held by United Utilities in a register that forms the Director General of OFWATs Report on Issue Number 5, hence 'DG5 Register'.

This register records the number of properties reported to have been affected by flooding both internally and/or externally due to hydraulic inadequacy of the public sewerage system. The register does not, however, record the number of properties considered to be at risk from external or internal flooding.

The map below shows the current distribution of properties / areas on the DG5 register. The larger the circle, the more properties.
